company with partnerships goal is to produce high-products based on purification method. newest technologies perfect brand competitive each of our European and market. Our designed to be attractive by design makes them a any office space. pays off double, for you

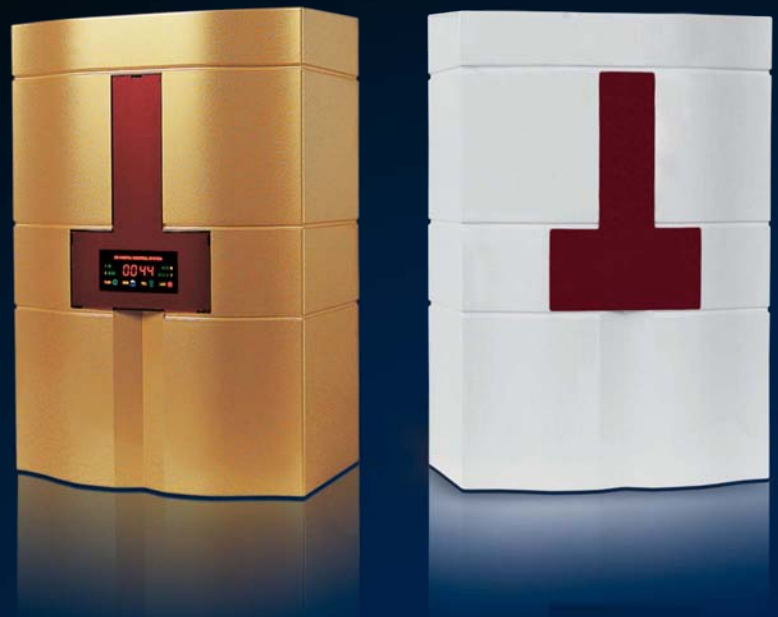

RO-24K-Series

RO-24K series is primarily oriented for household usage.

These series come in 2 colors and several modifications, starting from traditional R.O. device without pump, ending on fully digital, computer controlled model with anti-leak and self-regulation, self-adjustment pump.

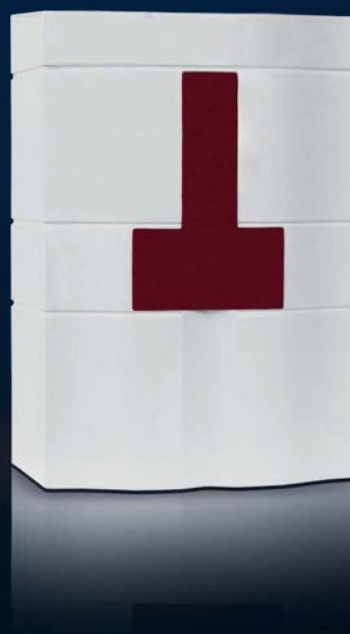

From technological aspect, this device comes with separate tank sizing from 2.2G metal stainless steel tank, ending on 4.0G plastic tank. Device uses new type of Push-In filters what shortens the time for replacing the filters.

Finally, from end user perspective, front display constantly shows the current status of filters usage, time how long water is inside the tank and work/flush/error indicators. If needed, this device can be hanged on wall just like a photo making it more compact since the only thing occupying space under the sink is the tank. A true compact and flexible device.
